

**General customer information on the regulations concerning REACH
Registration Evaluation Authorization Restriction of Chemicals**

The European regulation on chemical substances REACH entered into force on June 01, 2007 and is valid for all EU member states.

REACH provides a uniform regulation throughout the European Union for the registration, evaluation, authorization and restriction of chemical substances. Purpose of the regulation is to assure a high safety standard for both the human health and the environment for the use of chemical substances. The regulations require all companies manufacturing chemical substances (or importing chemical substances into the European Union) in quantities of one tonne or more per year to register and to evaluate these substances. Highly critical substances require an authorization.

Erhardt+Leimer is specialist for system solutions and automation technology on running webs and belts. We are among the leading suppliers of control and inspection systems for the textile, paper, corrugated, film, foil, tire, rubber, nonwovens and printing industry. Our broad product range concentrates on customized solutions for web guiding, web spreading, web tension measurement and control, cutting technology, measuring and inspection technology and print image monitoring.

Products from Erhardt+Leimer are manufactured under consideration of the applicable regulations and as far as can be seen are not subject to the registration, evaluation or authorization requirements.
